

COMPREHENSIVE PORTFOLIO ANALYSIS

Mr. B Govindarajan

ICICI Securities Private Wealth Management Account
Holdings as on July 24, 2026 (Demat 'other holdings' as on June 30, 2026)

Rs 27.43 Cr TOTAL WEALTH ANALYSED	Rs 16.98 Cr DIRECT EQUITY	Rs 9.81 Cr MUTUAL FUNDS	Rs 0.63 Cr ULIP FUND VALUE
---	-------------------------------------	-----------------------------------	--------------------------------------

Scope & Disclaimer

This report was prepared from photographs of the ICICI Securities PWM portfolio statement. It is an independent analytical exercise for education and discussion with your advisor; it is not investment advice, and figures should be re-verified against the original statement. ISEC PMS 'Ace Equity Advisory' assets are explicitly excluded from the source statement (see Section 9), so any PMS holdings are additional to the numbers here.

1. Executive Summary

The statement covers **Rs 26.79 Cr** of market-linked investments (Rs 16.98 Cr direct equity + Rs 9.81 Cr mutual funds), plus a ULIP worth Rs 0.63 Cr and residual demat holdings of Rs 54,999. Total wealth analysed: **Rs 27.43 Cr (~Rs 27.4 crore)**.

The portfolio is **100% equity/equity-linked** on the ICICI Securities books — the statement shows no fixed income, no debt mutual funds (other than a written-off segregated Franklin holding), and no gold, other than indirect debt/gold inside hybrid funds. The defining feature of the portfolio — and by far its biggest risk — is a single stock:

CRITICAL FINDING — Single-stock concentration

Eicher Motors = Rs 16.60 Cr — 97.8% of the direct equity book and roughly 60.5% of total wealth. 21,500 shares bought at an average of Rs 7,419 (cost Rs 15.95 Cr), now at Rs 7,721.50. The entire unrealised gain of Rs 65,03,750 is **short-term**, i.e. the position was built within the last 12 months. One company, one sector, one earnings call now decides the fate of this family's wealth. A 20% drawdown in this one stock erases ~Rs 3.3 crore — more than the combined value of every other direct stock held.

Headline scorecard

Block	Cost (Rs)	Market Value (Rs)	Unrealised P&L (Rs)	Return	Comment
Direct equity (28 stocks)	16,25,19,538	16,97,89,310.50	72,69,772.50	+4.5%	Distorted by recent Eicher buy
- of which Eicher Motors	15,95,08,500	16,60,12,250	65,03,750	+4.1%	97.8% of equity book, all ST gain
- equity ex-Eicher (27 stocks)	30,11,038	37,77,060.50	7,66,022.50	+25.4%	Long-tail of small positions
Mutual funds (24 lines)	6,59,16,634.23	9,80,65,246.32	3,21,48,612.10	+48.8%	XIRR 11.65% since inception
ULIP (ICICI Pru Elite Wealth II)	25,00,000	63,48,403.16	38,48,403	+153.9%	Est. XIRR ~10.8% over 11 yrs
Other demat	-	54,999	-	-	Groww MF units + 1 VECV share
Total analysed	23,09,36,172.23	27,42,57,958.96			

Top 5 findings

- **Extreme concentration:** Eicher Motors is ~60.5% of total wealth; the auto ecosystem overall (Eicher + other auto stocks + auto-ancillaries + HDFC Transportation & Logistics fund) is ~Rs 17.2 crore, i.e. ~63% of everything.
- **Zero fixed income:** asset-class table shows Equity 100.00%. For a portfolio of this size there is no liquidity buffer, no rebalancing dry powder, and full drawdown exposure. Only ~28% sits in hybrid funds where the fund manager holds some debt internally.
- **The mutual fund book is the quiet performer:** Rs 6.59 Cr invested has become Rs 9.81 Cr (+48.8%, XIRR 11.65%). Large, sensible positions in large-cap, balanced-advantage and manufacturing funds have compounded well — but 22 of 24 lines are Regular plans, costing an estimated ~Rs 60-100 lakh per decade in extra commissions versus Direct plans.
- **A long tail of clutter:** 27 direct stocks together are just 2.2% of the equity book; 13 of them are in loss (Ola Electric -54%, IRFC -53%, Kvality Walls -38%, Crompton -38%, Bajaj Housing -35%). None is large enough to matter — they add monitoring burden, not returns.
- **Data gaps to close:** ISEC PMS (Ace Equity Advisory) AUA is excluded from this statement; the Franklin Credit Risk segregated portfolio (25,369 units) is carried at nil; MF 12-month XIRR is just 0.56%, signalling a flat trailing year for the whole book.

2. Asset Allocation & Structure

The statement's own asset-class summary (ISEC book only): Stocks 63.39%, Mutual Fund-Equity 19.25%, Mutual Fund-Balanced 17.36%, Fixed Income 0.00%. Including the ULIP and other demat units, the true picture of the analysed wealth is below.

Component	Value (Rs)	% of total wealth
Direct equity - Eicher Motors	16,60,12,250	60.5%
Direct equity - other 27 stocks	37,77,060.50	1.4%
MF - pure equity schemes	5,15,54,834.44	18.8%
MF - hybrid/balanced schemes	4,65,10,411.88	17.0%
ULIP fund value	63,48,403.16	2.3%
Other demat holdings	54,999	0.02%
Total	27,42,57,958.96	100.0%

What this allocation implies

- **Effective equity exposure is ~90%+.** Hybrid funds (BAF/multi-asset/aggressive hybrid, Rs 4.65 Cr) typically run 30-80% net equity; assuming ~55% average, look-through equity is roughly Rs 24.5 Cr of Rs 27.4 Cr.
- **Concentration dwarfs diversification.** The entire 24-scheme, Rs 9.8 Cr mutual fund edifice diversifies less than the single Eicher position concentrates: a Herfindahl (HHI) calculation on total wealth gives ~0.37 — equivalent to holding fewer than 3 independent positions.
- **No liability/liquidity layer.** There is no visible emergency-fund, bond, arbitrage or liquid-fund allocation on this statement. Any cash need during a market fall would force selling equity at the worst time.
- **Dividend yield is negligible** (~Rs 79,365 dividends received since inception across all stocks, ~0.05% on current equity value) — the portfolio produces essentially no income stream.

3. Direct Equity — Deep Dive (28 holdings)

Cost Rs 16.25 Cr → market value Rs 16.98 Cr (+4.5%). Stripping out Eicher, the residual 27 stocks cost Rs 0.30 Cr and are worth Rs 0.38 Cr (+25.4%) — decent in aggregate, but the median position is only ~Rs 1.3 lakh, so even the 4-baggers (Pricol +401%, Indraprastha Medical +479%, SBI +449%) moved family wealth by less than 0.1% each.

Sector / Stock	Qty	Cost (Rs)	Mkt Value (Rs)	P&L (Rs)	P&L %	XIRR 12m	XIRR Incep.
Power							
Tata Power Co	370	1,50,893	1,39,175.50	(11,717.50)	-7.8%	-5.5%	-3.2%
Oil & Gas							
Indraprastha Gas Ltd	200	39,540	29,980	(9,560)	-24.2%	-25.7%	-3.5%
TOTAL (28 stocks)		16,25,19,538	16,97,89,310.50	72,69,772.50	+4.5%		

Note: Eicher Motors' 'XIRR since inception' is blank in the statement because the position is younger than a year; its 12-month XIRR of 26.09% reflects a favourable entry, and the P&L;% (+4.1%) reflects price movement on the full Rs 15.95 Cr outlay.

3.2 Winners, losers and what they tell us

Biggest winners (by % gain since purchase)

Stock	Abs. gain %	Gain (Rs)	XIRR incep.	Read
Indraprastha Medical Corp	+479%	1,51,780	53.2%	Small position, huge multiple - textbook winner kept too small
State Bank of India	+449%	2,07,075	34.1%	PSU bank re-rating captured
Pricol Ltd	+401%	2,00,414	43.3%	Auto-ancillary compounder
Federal Bank	+156%	54,037	30.9%	Strong hold
Tata Motors Ltd	+134%	34,996	203.0%*	*XIRR inflated by short holding period
Samvardhana Motherson	+113%	2,31,349	35.4%	Largest non-Eicher winner in Rs
ICICI Bank	+97%	70,737	18.0%	Compounder

Biggest losers (by % loss since purchase)

Stock	Loss %	Loss (Rs)	Read
Ola Electric Mobility	-54.2%	(2,84,410)	Biggest rupee loss ex-Eicher risk; thesis broken? Exit candidate / tax-loss harvest
IRFC	-53.2%	(19,754)	Bought near PSU-rally top
Kwality Walls India	-38.4%	(197.50)	Rs 317 position - demat dust
Crompton Greaves Cons.	-37.5%	(37,910)	Consumer durables drag
Bajaj Housing Finance	-34.6%	(67,261)	IPO-era entry at rich valuation
Hyundai Motor India	-27.2%	(36,570)	Recent IPO, all short-term loss
Indraprastha Gas	-24.2%	(9,560)	Regulatory margin squeeze
Hindustan Unilever	-18.2%	(4,817)	10 shares - negligible
Tata Motors PAX	-16.0%	(9,241)	Post-demerger stub

Sector exposure of the equity book

Automobile alone is 98.25% of direct equity. Aggregating the auto ecosystem across the whole portfolio (Eicher + 6 other auto stocks + 3 ancillaries + the HDFC Transportation & Logistics fund) gives **~Rs 17.19 crore = ~62.7% of total wealth** exposed to one cyclical, capex-heavy, EV-disruptable sector.

- Banks + finance stocks: Rs 7.79 lakh (0.46% of equity) - immaterial.
- Every other sector (FMCG, IT, pharma, power, chemicals, oil & gas) is below 0.2% of the equity book each.
- The 27 non-Eicher stocks look like an accumulated 'watchlist with money' - 13 sub-Rs-1-lakh positions, several from IPO allotments (Ola, Hyundai, Bajaj Housing) still carried at losses.

4. Mutual Funds — Deep Dive (24 lines, 13 schemes)

Cost Rs 6.59 Cr → value Rs 9.81 Cr, unrealised gain Rs 3.21 Cr (+48.8%). Since-inception XIRR 11.65% — a respectable outcome versus large-cap index returns, achieved with hybrid cushioning. Trailing 12-month XIRR is just **0.56%**, consistent with a flat/choppy market year; the negative 12-month XIRRs on most pure-equity funds (-1.4% to -4.4%) confirm it.

Value	2,46,728.72	0.25%	ICICI Pru Value
Sectoral - Metal ETF	59,436.61	0.06%	Groww Nifty Metal ETF

AMC concentration

- **ICICI Pru (42.7%) + HDFC (40.5%) = 83% of the MF book.** AMC-house concentration is a real, if second-order, risk (house investment style, key-person changes). Adding a third/fourth house at meaningful weight is advisable as the book grows.
- **Folio sprawl:** HDFC Balanced Advantage is held across five folios, HDFC Large Cap and HDFC Hybrid Equity across two each, Franklin Flexi Cap across two. Consolidating folios simplifies tracking, nominations and eventual succession.
- **Regular-plan drag:** 22 of 24 lines are Regular plans (only Kotak Multi Asset and Quant Multi Asset are Direct). At a typical 0.6-1.0% p.a. distributor-commission differential on ~Rs 9.4 Cr of Regular holdings, the annual cost is roughly **Rs 5.5-9.5 lakh** - Rs 60 lakh to Rs 1 crore per decade if the corpus merely stays flat. Where an advisor genuinely earns this via advice, fine; otherwise switching to Direct (after weighing capital-gains tax on switch) is the single largest 'free lunch' in this portfolio.
- **Category logic is broadly sound:** ~47% hybrid gives real drawdown cushioning; large-cap tilt in the equity sleeve is sensible. The oddities are the tiny tail positions (Value fund Rs 2.5L, Metal ETF Rs 59K, ELSS Rs 8.7L) that add lines without moving the needle.

4.3 Scheme-level performance read

Best compounders (XIRR since inception)

Scheme	XIRR incep.	Read
Groww Nifty Metal ETF	+33.8%	Tiny and young - not meaningful
HDFC Transportation & Logistics	+21.6%	Thematic auto bet that worked; overlaps Eicher risk
Quant Multi Asset (Direct)	+20.7%	Young position
ICICI Pru Manufacturing	+20.2%	Rs 1.06 Cr position, +51.5% absolute - genuine contributor
HDFC Flexi Cap	+13.8%	Rs 48 L position, steady
HDFC BAF (older folios)	+13.5%	Long-held small folios show the fund's real long-run power
Kotak Large & Midcap	+13.2%	Solid
ICICI Pru Large Cap	+12.5%	Biggest scheme, biggest rupee gain (Rs 71.9 L)

Laggards / attention list

Scheme	XIRR incep.	Read
Kotak Multi Asset (Direct)	-1.8%	Young; watch, not worry
Axis Large Cap	+9.7%	Chronic Axis underperformance era; switch candidate into existing large-cap
Axis ELSS Tax Saver	+10.6%	Lock-in likely over; roll into mainstream equity when tax-efficient
HDFC Hybrid Equity (folio /56)	+9.3%	Duplicate folio of same scheme
ICICI Pru Value	+9.8%	Rs 2.5 L orphan position
Franklin Flexi Cap folios	+10.1% / +11.4%	OK performance; two folios of same scheme should be one

Equity vs hybrid sleeves

Sleeve	Cost (Rs)	Value (Rs)	Abs. return	XIRR	Comment
Pure equity sleeve	3,21,44,034.51	5,15,54,834.44	+60.4%	+12.69%	Driven by large-cap & manufacturing
Hybrid sleeve	3,37,72,599.72	4,65,10,411.88	+37.7%	+10.28%	Lower return, much lower volatility

The ~2.4 percentage-point XIRR gap between the sleeves is the price paid for the hybrid cushion. Given the monstrous single-stock risk sitting next door in the equity account, this cushion is currently the portfolio's only real shock absorber - it should be preserved (or even enlarged with genuine fixed income) until the Eicher position is diversified.

5. Insurance (ULIP) & Other Demat Holdings

5.1 ICICI Pru Elite Wealth II - RP (Policy 19369756)

Issued / Matures	30 Jun 2015 / 30 Jun 2035
Life cover	50,00,000
Premium	5,00,000 p.a. x 5 years (paid till 30 Jun 2020 - premium term complete)
Total premiums paid	25,00,000
Fund value (24 Jul 2026)	63,48,403.16
Multiple on premiums	2.54x over ~11 years
Estimated XIRR	~10.8% p.a. (5 annual outflows 2015-19 vs today's value)

- A ~10.8% net XIRR is genuinely decent for a ULIP - charges are now largely behind (they front-load), so the ongoing economics resemble a moderately-priced equity fund with a small life cover attached.
- Under current tax law, ULIP maturity proceeds stay tax-exempt u/s 10(10D) for policies issued before Feb 2021 with premium ≤ Rs 2.5L/yr - this policy (Rs 5L premium) should be checked with a tax advisor; the 2021 amendment applies to policies issued after 1 Feb 2021, so this 2015 policy's maturity should remain exempt. That exemption argues for holding to 2035 rather than surrendering.
- Life cover of Rs 50 L is trivial against Rs 27+ Cr of wealth and presumably substantial family expenses - if income protection matters, a separate term policy is the right instrument; the ULIP should be viewed purely as an investment.

5.2 Other holdings in demat (30 Jun 2026)

ISIN	Scrip	Qty	Price (Rs)	Value (Rs)
INF666M01NI0	Groww Mutual Fund units	4,999	11.00	54,989
INE014T01013	VE Commercial Vehicles Ltd	1	10.00	10
Total				54,999

The single VE Commercial Vehicles share (unlisted; from the 2011 Eicher restructuring era or a corporate action) and the Groww MF units held in demat form are housekeeping items - the Groww units duplicate the Metal ETF exposure category and could be consolidated into the main MF fold.

5.3 PMS - the missing piece

PMS data gap

The statement's explanatory note says: 'AUA for ISEC PMS Ace Equity Advisory are not included in this report.' If the family holds a PMS with ICICI Securities (or elsewhere), its holdings, costs and overlap with this portfolio are invisible here. Before acting on any recommendation in this report, pull the monthly PMS statement and check: (a) whether the PMS also holds auto/Eicher exposure (compounding the concentration), and (b) total-wealth asset allocation including PMS.

6. Risk Analysis

Risk	Rating	Detail
Single-stock concentration	SEVERE	Eicher = 60.5% of wealth. Prudent norm: no single stock >5-10%. A -30% stock move = -Rs 5.0 Cr (-18% of wealth).
Sector concentration	SEVERE	Auto ecosystem ~63% of wealth (incl. transport fund & ancillaries). Cyclical + EV disruption + export/tariff sensitivity.
Asset-class concentration	HIGH	100% equity-linked on ISEC books. No bonds/liquid funds visible; hybrids are the only cushion (~17% of wealth, internally ~40% debt).
Liquidity risk	MODERATE	Eicher is liquid large-cap, exit is mechanically easy - but a Rs 16.6 Cr sale has tax and timing consequences; no cash buffer exists for emergencies.
Tax-event risk	MODERATE	Eicher gain currently 100% short-term (20% STCG). Premature exit locks in higher tax; but waiting for LTCG (12.5%) must be weighed against concentration risk every single day.
AMC concentration	LOW-MOD	83% of MF book with 2 AMCs (ICICI Pru + HDFC).
Product hygiene	LOW	5 folios of one scheme, Regular-plan fee drag, Franklin side-pocket, orphan micro-positions - operational, fixable.
Data completeness	NOTE	PMS excluded; 'other holdings' dated 30-Jun vs 24-Jul for the rest; report validity depends on original statement disclaimer.

Stress scenarios (illustrative)

Scenario	Wealth impact	% of total
Auto down-cycle: Eicher -30%, other auto -25%, MFs -8%	-Rs 5.9 Cr	-21.5%
Broad bear market: equity -25%, hybrids -12%	-Rs 6.6 Cr	-24.1%
Eicher company-specific shock: -40%, rest flat	-Rs 6.6 Cr	-24.2%
Post-diversification (Eicher trimmed to 10%, 50% bonds added): same bear market	~-Rs 2.5-3 Cr	~-10%

The last row is the point: the portfolio's downside is a *choice*, not a fate. Diversifying the single-stock and single-sector bets cuts worst-case drawdowns by more than half without necessarily giving up long-run equity returns.

Behavioural observations

- The MF book shows patient, systematic behaviour (large positions, multi-year holding, +48.8%). The direct-equity book ex-Eicher shows the opposite - many small speculative entries, IPO punts held through -30-50% losses.
- The Eicher position is either (a) deep conviction/insider-style knowledge (e.g. professional connection to the company), (b) an inheritance/ESOP-type event, or (c) a very large momentum bet. Each has a different right answer - but none of them justifies 60% of family wealth in one ticker for long.

7. Tax Position & Planning

Where the unrealised gains sit (per statement)

Bucket	Unrealised gain (Rs)	Comment
Direct equity - short-term	67,01,189	Dominated by Eicher Rs 65.04 L ST gain (auto subtotal ST Rs 64.54 L net of Ola/Hyundai ST losses)
Direct equity - long-term	5,68,583.50	Modest; several LT losses embedded too (ties to total equity gain Rs 72.70 L)
Mutual funds - short-term	36,897.11	Negligible
Mutual funds - long-term	3,21,11,715	The big one: Rs 3.21 Cr LTCG if fully redeemed

- **Eicher timing trade-off:** selling today taxes ~Rs 65 L of gain at 20% STCG (~Rs 13 L). Once holdings cross 12 months, the rate drops to 12.5% LTCG (saving ~Rs 4.9 L on today's gain) - but every month of waiting carries ~Rs 16.6 Cr of single-stock risk. A staged sell-down (e.g. tranches monthly as lots cross the 1-year mark, or immediately for risk control on a portion) balances both. The statement shows purchase lots' aging via ST/LT split - ask for the lot-wise report to sequence sales precisely.
- **Tax-loss harvesting inventory:** booked losses can offset gains - Ola Electric (-Rs 2.84 L, part ST), Hyundai (-Rs 36.6K ST), Bajaj Housing (-Rs 67.3K LT), Crompton (-Rs 37.9K LT), IRFC (-Rs 19.8K LT), IGL, Tata Power, Tata Motors PAX, HUL, Infosys, Cyient DLM, Kwaliti Walls - total roughly Rs 5.4 L of harvestable losses that can shelter part of the Eicher STCG if realised in the same FY.
- **MF redemptions:** Rs 3.21 Cr of LT gains means any large restructuring (e.g. Regular→Direct switches, scheme consolidation) is a taxable event at 12.5% beyond the Rs 1.25 L annual exemption. Sequence switches over multiple FYs, use the annual exemption each year, and prioritise switching the schemes with the smallest embedded gains first (e.g. Quant/Kotak Multi Asset, ICICI Value, newer folios).
- **Dividends** are taxed at slab; current dividend flow is negligible, so no action.
- **ULIP:** hold-to-maturity likely preserves Sec 10(10D) exemption (pre-2021 policy) - confirm with CA; avoid partial withdrawals that could complicate the exemption.

Perspective

Illustrative arithmetic on the Eicher trim: selling 90% of the position (Rs 14.9 Cr) after lots turn long-term, at today's prices, would realise roughly Rs 5.9 L x 90% = ~Rs 58.5 L LT gain, taxed ~Rs 7.2 L after the Rs 1.25 L exemption - about 0.5% of the amount being de-risked. Tax is not a reason to stay concentrated.

8. Action Plan (prioritised)

Priority 1 - within the next quarter

- **De-risk Eicher Motors.** Define a target weight (5-10% of wealth = Rs 1.4-2.7 Cr) and a written sell-down schedule: immediate partial sale for risk control (accepting 20% STCG on that slice), remainder in tranches as lots cross 12 months. Consider a stop-loss discipline on the retained stake. If there is an emotional/professional attachment to the stock, cap it explicitly rather than implicitly.
- **Redeploy proceeds into a real asset allocation.** E.g. 55-60% diversified equity (existing MF line-up can absorb it), 30-35% fixed income (target-maturity gilt/PSU funds, short-duration funds, arbitrage for <1yr money), 5-10% gold/international. This single step converts the stress-test drawdown from ~-24% to ~-10%.
- **Build the liquidity layer:** 12-24 months of expenses in liquid/arbitrage funds before anything else.
- **Pull the PMS statement** and re-run allocation including it; verify no additional auto/Eicher overlap.

Priority 2 - this financial year

- **Harvest the ~Rs 5.4 L of embedded small-stock losses** in the same FY as Eicher sales to offset STCG; exit the broken-thesis names outright (Ola Electric, IRFC, Kwaliti Walls, Crompton, Bajaj Housing if conviction is gone).
- **Prune the equity tail:** fold the remaining sub-Rs-3-L positions into the MF book or a single flexi-cap fund - 27 stocks for 1.4% of wealth is pure administrative drag.
- **Begin Regular→Direct migration** where advice isn't being paid for: start with low-gain schemes; use the Rs 1.25 L LTCG exemption annually. Estimated saving: Rs 5.5-9.5 L per year.
- **Consolidate folios:** 5 HDFC BAF folios → 1; 2 HDFC Large Cap → 1; 2 HDFC Hybrid Equity → 1; 2 Franklin Flexi Cap → 1. Update nominations everywhere while at it.

Priority 3 - structural hygiene

- Reduce two-AMC dominance (83%) as new money flows: add a third house or index funds.
- Retire micro-positions in the MF book (ICICI Value Rs 2.5 L, Metal ETF Rs 59 K, Groww demat units Rs 55 K) into core schemes; roll Axis ELSS into a mainstream fund once lock-in lapsed.
- Track Franklin segregated-portfolio recovery payouts (folio 18500483).
- Hold ULIP to 2035 maturity for tax-free proceeds (verify 10(10D) with CA); buy separate term cover if income protection is needed.
- Set an annual review: allocation vs target, XIRR vs benchmark (Nifty 50 TRI / CRISIL hybrid indices), and a one-page risk dashboard (top position %, sector %, equity %).

What is already right (keep doing it)

- The MF core - large-cap + BAF + manufacturing - has compounded at 11.65% XIRR with real downside cushioning; position sizes are sensible and holding periods long.
- The ULIP's costs are sunk and it now compounds respectably tax-free - patience here is being rewarded.
- Winners like Samvardhana Motherson, SBI, ICICI Bank, Pricol show genuine stock-picking ability when position-sized deliberately - the skill is present; the sizing discipline is what needs to catch up.

9. Appendix — Source Data & Reconciliation

Statement reconciliation

Item	Value (Rs)	% (ISEC book)	Check
Stocks (statement p.3)	16,97,89,310.50	63.39%	Matches sum of 28 holdings (p.5-10)
Mutual Fund - Equity (p.3)	5,15,54,834.43	19.25%	Matches MF equity sub-total (p.14)
Mutual Fund - Balanced (p.3)	4,65,10,411.87	17.36%	Matches MF balanced sub-total (p.16)
Fixed income / MF-Debt (p.3)	0	0.00%	Franklin segregated units carried at nil
ISEC portfolio total	26,78,54,556.80	100.00%	Verified: components sum exactly
ULIP fund value (p.18)	63,48,403.16	-	Outside asset-class table
Other demat (p.19, 30-Jun)	54,999	-	Outside asset-class table
Grand total analysed	27,42,57,958.96	-	

Notes, caveats and data quality

- Figures were transcribed from 15 photographs of the PDF statement; minor OCR-level transcription risk exists. All section totals were re-computed and tie to the statement's own totals (stocks total re-verified to the rupee: Rs 16,97,89,310.50).
- XIRR figures are as printed by ICICI Securities; 'XIRR since inception' is position-specific money-weighted return, not scheme performance. Extreme values on tiny/young positions (e.g. Infosys -84.6%, Tata Motors +203%) reflect short holding windows.
- The statement notes: PMS Ace Equity Advisory AUA excluded; private equity/real-estate funds valued at drawdown cost; report 'not valid without disclaimer'. Insurance data is limited to ICICI Prudential policies shared with I-Sec - other insurers' policies, EPF/PPF, bank FDs and real estate are outside this analysis.
- Dividend 'received since inception' totals ~Rs 79,365 across equities; MF dividend column is nil (all growth plans - good tax hygiene).
- Estimated ULIP XIRR (~10.8%) computed from 5 annual premiums of Rs 5 L (2015-2019) against the 24-Jul-2026 fund value; actual XIRR depends on exact premium dates.
- This document is for education and discussion with a SEBI-registered investment advisor and a chartered accountant; it is not a recommendation to buy or sell any security.

Bottom line: a Rs 27.4 crore portfolio with a well-built Rs 9.8 crore mutual-fund engine, a respectable ULIP, real stock-picking flashes - and one decision (Eicher at 60% of wealth) that currently overrides everything else. Fix the concentration and the asset allocation, harvest the tax losses while doing it, cut the fee drag, and this becomes a genuinely robust family portfolio.
